

# DRESSER®

## Style 91 Service Saddle

Available with single or double stirrup for water applications...

- Rugged body construction for long service life
- Stirrups of high-strength Dresserloy...  
Features an extra wide bearing surface against pipe
- Fits full range of steel pipe
- Single or double stirrups to meet service conditions
- Greater stirrup strength

**D**resser **Style 91** service saddles provide a quick, easy way to make service connections on steel pipe. They are specifically engineered for accurate fit and long-term sealing performance.

Ruggedly constructed for long service life, Style 91 service saddles have the extra strength engineers like. The stirrups are made of a high strength Dresserloy material, accurately shaped to conform to the outside of the pipe. Extra wide bearing surfaces prevent any cutting or crushing of the pipe. The gasket is made of a time-proven Dresser compound, securely cemented into place for easy installation.

Dresser Style 91 saddles are furnished with 1/2" thru 2" NPT tapped bodies. They are available in single and double stirrup configurations and each is designed to accurately fit steel pipe within a range of each nominal size - clearly marked on each saddle body.
